

Do You Print Only for Capturing a Signature?

Most companies today automate their business processes and document workflow procedures, leaving the approval stage as the only element that requires the use of paper. The electronic process is limited and documents are being printed only for the purpose of capturing a signature. The signed and approved hardcopy then needs to be scanned back into an electronic archive in order to comply with the electronic workflow.

Forget All About: Printing, Faxing, Scanning and Manual Archiving

By using SIGNificant, the handwritten signature automatically becomes an inherent part of the digital document workflow. SIGNificant is a web-based application allowing one to sign any document from any location, without having to print it.

Digitally Sign all Types of Business Documents:

- | | | |
|--|---|--|
|  Agreements & Contracts |  Bank Transfers & Transactions |  Service Agreements |
|  Purchase Orders |  Legal Documentation |  Work Statements |

SIGNificant offers an intuitive signature solution designed to automate your business approval processes. By using SIGNificant, your organization can immediately reduce paperwork costs, increase responsiveness and reduce operation time while maintaining a highly secure approval process.

SIGNificant - Value Added Benefits:

→ As Easy as Signing on Paper

Signing an electronic document with SIGNificant is as easy as pen-and-paper signature. Simply 'Click to Sign' and use the digital pen to sign on a TabletPC screen, PDA or on a desktop digital tablet. Your signature will immediately appear in the document.

→ Fully Secured Document

Once the document has been signed using SIGNificant, it cannot be forged. Editing or adding any kind of information will result in invalidating the signature.

→ Handwritten Signature Embedded into Document

SIGNificant embeds the electronic signature, the user information and the signature's biometric parameters into the document. The graphical signature can be viewed on screen as well as in print, and is part of the complete document.

→ No Installations or Downloads Needed

SIGNificant is a web-based application, and internet access is all that is needed. No installation or download is required to commence the work process. Users on the go, can sign from any location, avoiding approval delays.

→ Verifiable by Anyone, Anywhere

Based on an RSA encryption technology that is compatible with the Adobe® Reader specification, the signed document along with the signature graphics and data can be viewed and verified by anyone.

→ Multiple Application Support

SIGNificant handles any printable document. Be it Word, Excel, PDF, Email application or any other proprietary application your company is using for its document handling and reports. Simply add signature location and characteristics to any document template and SIGNificant will replace it with a signature field.

→ Legal Compliance

The signature is added into the document the same way as signing a paper, allowing a legally binding approval process.

→ Multiple Signatures with Predefined Hierarchy

An unlimited number of internal and external users can sign a document according to a pre-defined signature flow. The document can be signed from any remote location using a web browser. The browser-based signature designer provides an easy to use drag-and-drop interface for signature flow creation.

→ Seamless Integration with Existing Approval Process

Regardless to the number of users, the integration is quick and simple. SIGNificant can be easily incorporated into any existing business procedure and document workflow. The signed document can be automatically added into any existing archiving solutions.

→ Biometric Authentication (optional)

SIGNificant allows biometric signature authentication, verifying a person's identity based on his signature traits. Each signature is compared against a pre-enrolled profile containing the signature parameters.

SIGNificant Signature Solutions GmbH

SIGNificant Signature Solutions was co-established by WonderNet, provider of handwritten digital signature solutions and xyzmo, provider of visible and safe marking technologies for electronic document management.

SIGNificant™ is a web-based handwritten signature solution that equips organizations with a smooth transition for a paperless environment.

Using this unique product, customers can sign any printable document without having to deal with hardcopies for obtaining an authenticated signature. The signed copy can be printed and given to the customer, while the organization only keeps the signed softcopy. No printing, scanning and manual archiving is ever needed again. Signed forms are instantly cataloged, archived, and dispatched to the back office.
